## About Us

The Pend O'reille (Ponderay) Series of windows was designed for home owners and home builders who still care about quality and craftsmanship. In recent years, the industry has seen a rush toward thinner frames and cheaper construction. The Pend O'reille Series features thicker walls and a wider exterior than typical low-end construction grade products. At The Coeur d'Alene Window Company, we are committed to providing discerning builders and homeowners with a product they can be proud to put in their homes and projects.

## Color Selection

The Pend O'reille Series is available in white and adobe colors.

## Intelligent Design

Our windows are designed with built in advantages such as internal walls that drain water rather than allowing it to build-up. Our weep holes are off-set to prevent blow back in the wind. Finally, all Coeur d'Alene Series Windows include addition internal walls to improve stability and resistance to temperature change.

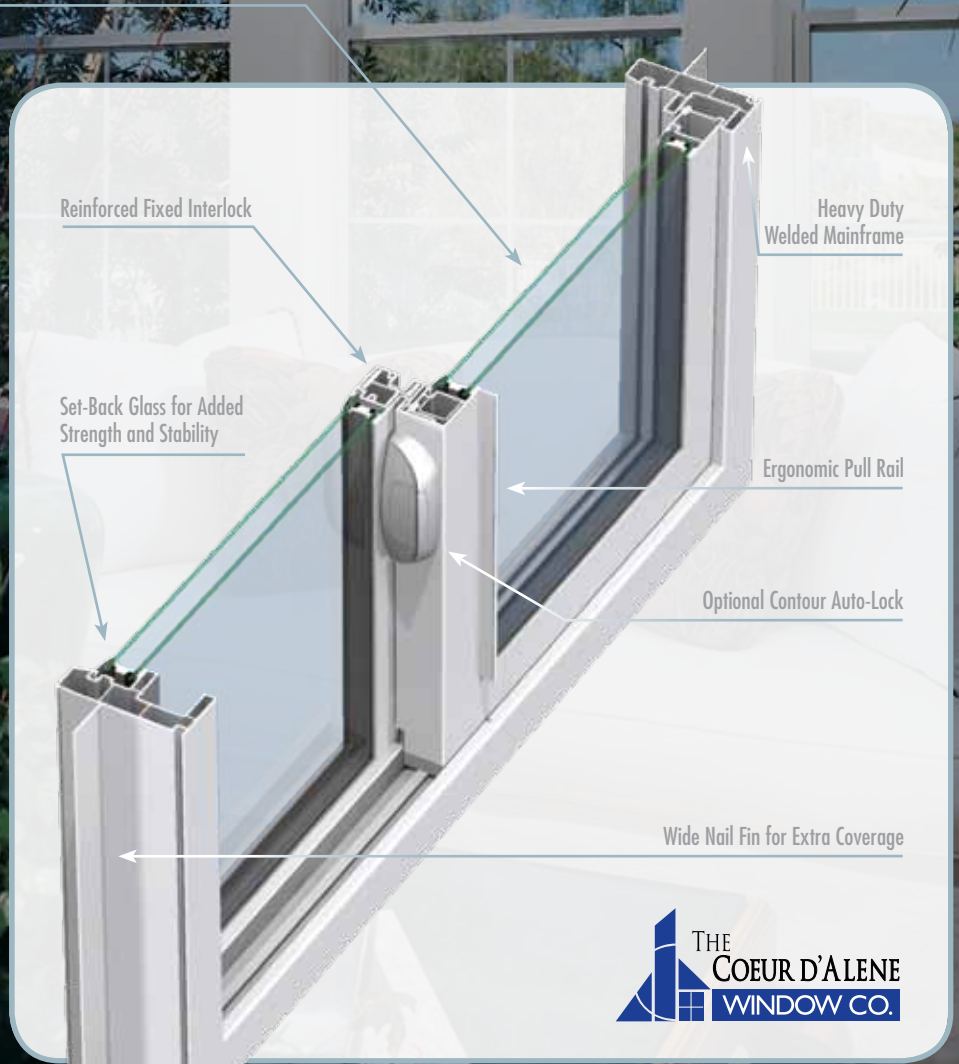

# Strength

The Coeur d'Alene Window Company reinforces every operating window in the Coeur d'Alene Window Series family with steel reinforcement at the fixed interlock to ensure years of trouble free operation. Our sliding windows operate on rollers with stainless steel axels to prevent weight and use from taking their toll. The glass on our 3 1/4" frame is set back to prevent the frame from sagging over time.

# Low-e 366

Pend O'reille Windows include Low-e2 glass standard. Your home will stay warmer in the winter and cooler in the summer with our Cardinal Low-e2 glass. For even better performance, upgrade to Low-e 366 or Neat easy-clean glass.

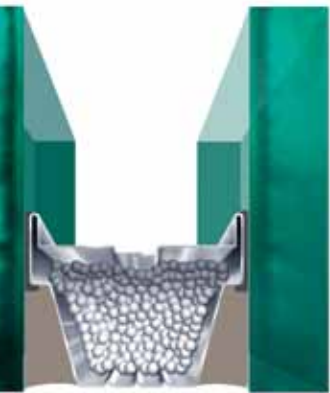

# Warranty

Because you shouldn't have to worry about seal failures or other problems, Coeur d'Alene Windows are backed by a transferable limited lifetime warranty. Ask your sales representative for a copy of our guarantee.

# XL Edge Spacer

XL Edge insulating glass comes with the lowest failure rate in the industry – developed in part from Cardinal's 45 years of experience in manufacturing IG units, 27 of these years utilizing a dual-seal silicone system. Cardinal's superior IG construction translates into a 0.2% seal failure rate over twenty years - plainly the lowest in the industry.

# Energy Star

Making your home more energy efficient with ENERGY STAR can help to reduce high energy bills, improve comfort and help to protect the environment. Improving energy efficiency is also an important first step for homeowners interested in green remodeling.

The Coeur d'Alene Window Company participates in the ENERGY STAR program and recommends that you buy windows which adhere to ENERGY STAR guidelines.
